Selected(orange) fields contains predefined values stored in related tables:

*genre*

*remark*

*status*

*lang* (list of ISO language names)

*country* (list of ISO country names)

moreover the base "objects" referred by other tables are:

*isbn* (books)

*authorID* (authors)

An author (young writer) can have more than one work (writing, picture, etc...).

Works can have more than one author.

*Genre* is related only to *books* and *creative writings*.

Books are archived by the ISBN code.

Books are related to other resources through the ISBN code.

Different publications of the same book (having different isbn code) are different record in the database.

Authors are untied from schools and classes and undirectly related to them by the works.
